                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0 0 0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ဂ ဂ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a novel enzyme of starch biosynthetic pathway in a cereal plant, where the enzyme is selected from starch branching enzyme (SBE) I , SBE II, starch soluble synthase (SSS) I, and debranching enzyme
                                                                                                                                                                               New isolated cereal plant enzyme genes used for, earntisense sequences of granule bound synthase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Starch biosynthetic pathway; cereal plant; enzyme; SBE; SSS; DBE; GBSS; starch branching enzyme; starch soluble synthase; debranching enzyme; endosperm; wheat; barley; granule-bound synthase; glutenin; starch; grain softness protein I; bacterial isoamylase; glycogen synthase; wSBE I-D4 gene; ss.
                                                                                                                        Claim 8; Page 75-81; 171pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    10313

A 1 40	wheat or barley. They can be used for the expression of e.g. wheat or barley. They can be used for the expression of e.g. se sequences of granule-bound synthase (GBSS), SBE II, low mol. tenin, grain softness protein I, bacterial isoamylase, bacteria n synthase, and wheat high mol. wt. glutenin BxI7. They can be r modifying the characteristics of starch produced by a plant. sequence represents the SBE II gene sequence.                                                                                                                                                The present sequence represents a partial genomic sequence of a wheat starch branching enzyme, designated BEIIb. BEIIb is a type II starch branching enzyme (SBE). The BEIIb nucleic acids may be used to genetically transform cereal plants such as wheat or barley and for altering their nutritional content by modulating the starch biosynthetic pathway to vary levels of amylopectin and/or amylose produced in the plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Triticum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAH78343 standard;

The present sequence encodes wheat starch branching enzyme 9, designated BEIIa. The specification describes BEIIb. BEIIb is a type II starch branching enzyme (SEE). The BEIIb nucleic acids may be used to genetically transform cereal plants such as wheat or barley and for altering their nutritional content by modulating the starch biosynthetic pathway to vary levels of amylopectin and/or amylose produced in the

The methods and products can be used for targeting expression specifically to the endosperm of the seeds of cereal plants such as wheat or barley. They can be used for the expression of e.g. antisense sequences of granule-bound synthase (GBSS), SBE II, low mol. wt. glutenin, grain softness protein I, bacterial isoamylase, bacterial glycogen synthase, and wheat high mol. wt. glutenin Bx17. They can be used for modifying the characteristics of starch produced by a plant. The present sequence represents the SBE II gene sequence. (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 8; Page 75-81; 171pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated cereal plant enzyme genes used for, e.g. expression antisense sequences of granule bound synthase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI; 1999-229525/19.

A. tauschil is likely to be the ancestral D genome donor of wheat. Probes isolated from the present sequence were used to identify type II starch branching enzymes (SBEs) in wheat, especially BSIID. The BEIID nucleic acids may be used to genetically transform cereal plants such as wheat or barley and for altering their nutritional content by modulating the starch biosynthetic pathway to var levels of amylopectin and/or amylose produced in the plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI;

New plant genes encoding polypeptides having an activity involved in or associated with the synthesis, metabolism or degradation of carbohydrates in the plant grain useful in generating plants having improved in the plant grain useful in generating nutritional properties.

Claim 35; SEQ ID NO 523; 130pp; English

This invention, in the area of plant biotechnology, relates to novel polymucleotides comprising a nucleotide sequence encoding a protein which is involved in or associated with the synthesis, metabolism or degradation of carbohydrates in the plant grain and the expression of which is up-regulated during grain filling. The plant is selected from corn, tomato, banana, canola, cotton, peanut, sorghum, tobacco, sugarbeet, wheat, and rice. The invention may be useful for the improvement of protein, oil, starch, fibre and moisture content of the cereal grains. In addition, carbohydrate levels may be modified to a more desirable level using the present invention. The present sequence is a DNA sequence encoding a rice protein of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to patternal, fingal or viral infection. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 6; SEQ ID NO 4612; 899pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Identifying at least one gene involved in plant resistance or response to pathogenic infection for conferring resistance or tolerance to a plant to bacterial, fungal or viral infection by determining or detecting plant gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Oryza sativa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Plant; bacterial infection; fungal infection; viral infection; rice; gene; {\tt ds}.

                                                                                                                                                                                       The present sequence encodes the rice type IV starch branching enzyme, which has the ability to synthesise amylopectin. The quality of starch improved by the use of the protein. (Updated on 25-MAR-2003 to correct field.)

The plant is selected from corn, tomato, banana, cannola, cotton, peanut, sorghum, tobacco, sugarbeet, wheat, and rice. The invention may be useful for the improvement of protein, oil, starch, fibre and moisture content of the cereal grains. In addition, carbohydrate levels may be modified to a more desirable level using the present invention. The present sequence is a DNA sequence encoding a rice protein of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/publishedpot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New plant genes encoding polypeptides having an activity involved in or associated with the synthesis, metabolism or degradation of carbohydrates in the plant grain useful in generating plants having improved nutritional properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Zhu T, Cheng W, Briggs

It was obtd. by site-specific mutagenesis of the SBEIIb gene in plasmid pBE240 to generate an NcoI site at the ATG start site, and EcoRI digestion of the mutagenised plasmid. The 2.09 kb fragment was inserted, in sense orientation, between the zein promoter and 3' regions in vector pML103 to produce pBE96. Cosuppression and antisense techniques can be used to inhibit SBEIIb in transgenic plants and thereby alter starch properties
                                                                                                                                                                                                  Starch branching enzyme IIb; transgenic plant; pBE45; ss.

It was generated by EcoRI digestion of plasmid pBE240 and was inserted into vector pMLD103 in antisense orientation with respect to a maize 27 kba zein promoter and a 10 kba zein gene 3' sequence. Transgenic corn plants expressing the near full-length SBEIIb antisense transcript demonstrated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Transgenic corn in which grain derived starch fine structure is controlled - specifically branch chain distribution of amylopectin, useful in preparation of thickened foodstuff.
                                                                                                                                                                                                                    Non-glycogen-like polysaccharide production; fermentation; starch synthesis enzyme; glycogen-synthesis enzyme; glycogen synthesis; non-starch branching gene; amylopectin; amylose; plant-like starch; maize branching enzyme II; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 2165 BP; 593 A; 580 C; 416 G; 576 T; 0 U; 0 Other;

The method comprises transforming a host, suitable for fermentation, with genes encoding starch- or glycogen-synthesis enzymes, and fermenting the transformants. The specification also describes hosts transformed with a gene active in glycogen synthesis and at least one non-starch branching gene, involved in production of amylopectin or amylose in its original host. The method is used to produce plant-like starches by fermentation and non-food applications of these starches are useful for all food and non-food applications of starch. The present sequence is used in the course of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Producing non-glycogen-like polysaccharides in bacteria, fungi or platransformed with genes for enzymes involved in starch or glycogen synthesis allows fermentative production of starches with engineered

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A CDNA insert (AAT69729) in plasmid clone pBE240 comprises a 2.7 kb EcoRI -XhoI fragment isolated from a corn cDNA library. It includes an open reading frame encoding starch branching enzyme IIb (SBEIIb) (AAM19212). The insert was used as a starting point in the assembly of DNA constructs (see also AAT69730, AAT69736-37) designed to achieve suppression of SBEIIb expression in transgenic corn plants, and thereby to produce novel starches that have properties beneficial in food and industrial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Example 1; Page 50-53; 92pp; English.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    멂

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     OM nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Total number of hits satisfying chosen parameters:
                                                                                                                                                                                                                                                                                                                                                                                                                                         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
